

Record your race and sail smarter (for skippers only – one tracking per yacht!)

The raceQs' tracker app records sailing data with your phone and creates a 3D replay of your race online.

The 3D replay will show your boat and any other boats who were recording in your area. Select anyone in the replay to learn from the top performers in your fleet. Watch the replay with your crew and evaluate your race in the club, and at home online.

You can choose to upload your recorded tracks immediately over cell phone signal, or save them to upload over Wi-Fi. Turn on "Live Broadcast" and your friends can watch your race "live", on your raceQs' journal page.

The raceQs' app is more than just a tracking device. It also records the motion of your boat using the accelerometer and gyroscope in your phone. Watch your race replay to evaluate your tacking patterns, boat handling, heel angle, and more. It will change the way you race.

Will other boats show up in my replay?

All boats recording in the same geographic area, at the same time, will automatically show up in your race replay.

Do I need cell phone coverage for the phone app to work?

No cell phone or internet coverage is required for regatta tracking, although you need it for a live broadcast. Just record your race with the phone app, and upload it later.

Will the app work down below?

Yes. Your phone GPS will still work through most sailboat decks.

Do I need to stop and start the app between the races?

No, unless you want to save battery life. You can segment the races afterward.

Will the app track me all the way home and publish my location online?

If you forget to shut off your app, we designed a failsafe that will shut off tracking once you reach a certain speed in your car.
